

# In the Trenches With PowerPoint Add-Ins

Invaluable tools to help the earnest slide-maker

TROY CHOLLAR

Move beyond the capabilities of PowerPoint in designing slides to enhance your presentation workflow. Work faster, more efficiently and accomplish layout and animation effects that are impractical using standard application tools. This workshop explores add-ins from multiple companies and shows examples of each, including:

- Instantly make a line 100% straight on the horizontal (X) or Vertical (Y) axis
- Resize multiple images or shapes to instantly be the same size
- Quickly setup a color scheme direct from a slide
- Change any text box to the Title placeholder in two clicks
- Convert a 4x3 presentation to 16x9 without distorting images, chart, or tables

*This session is for intermediate and advanced PowerPoint users who want to maximize efficiency. You will learn about the wide range of PowerPoint add-ins from an expert user who has no ties to any of the manufacturers.*
